Description

The Firefly PRO Solas emergency strobe light boasts an all-new light output power management system that produces over 41 candelas of light per strobe for up to 56 hours of use (with AA lithium batteries). Using wide-light emission LEDs, it cuts through even the toughest conditions, creating a super-bright flash visible for over 3 miles.

The innovative new wide light emission LEDs produce a 360° beam of light (41 candela) allowing for visibility of over 3 miles. The cool white light has no yellow tinting which allows for a more visible light beam that can be seen at greater distances. With an energy efficient microprocessor and redesigned electronics, the Firefly PRO boasts maximum operation life in the harshest of conditions. With a single set of AA Lithium batteries, the Firefly PRO will continuously strobe for over 56 hours or use the Steady-On feature for 28 hours. That is twice as long as competitors and exceeds USCG and SOLAS requirements by over 48 hours.

The new compact size will easily fit inside an inflatable life jacket or pocket for comfortable wear-ability. The military spec casing is rugged enough to withstand years of abuse and the harshest environments. The two lashing loops and included Velcro strap make mounting the Firefly PRO to your life jacket, belt or pack extremely easy so that the strobe light can be readily accessible the moment you need it.

Features:

- 360° beam of light (41 candela)

- manual ON/OFF switch
- 3 operating modes: steady-on, strobe, SOS flash
- waterproof up to 33 feet. (10 m)
- over 3 miles visibility
- continuously strobe for over 56 hours
