Description

Sika® MultiPrimer Marine is a solvent-based colourless to slightly yellow primer, which reacts with moisture and forms a thin layer. This layer acts as a link between substrates and adhesives.

Sika® MultiPrimer Marine is specifically formulated for the treatment of bond faces prior to application of Sika's 1-component Polyurethanes.

Sika® MultiPrimer Marine is used to improve adhesion on many metals such as aluminium, steel, galvanized steel, non-ferrous metal and on wood such as teak, mahogany, Oregon pine and cork. The primer might also be used to enhance the adhesion of Sikasil® sealants and adhesives.
