Description

Inconspicuous yet powerful, the Cruise pod models offer high-tech propulsion in the 6 to 25 HP performance class. Suitable for motorboats or sailboats up to 12 tons.

The Cruise FP models are installed in a fixed position (therefore the abbreviation FP – fixed pod) as generally desired for sailboats and also for some motorboats. The pod motors for sailboats are available with folding propellers. Other boats would choose our standard, highly efficient propellers.

Choose from performance classes from 3 to 12 kW, which correspond to the propulsive power of 6 to 25 HP combustion engines.

Features:

- Maximum efficiency for greater performance and range
- All models with GPS on-board computer and display: Real-time display of speed and input power – and also the exact battery status and remaining range when used in combination with the Power 24-3500 or Power 48-5000 lithium battery
- Connection to TorqTrac: the premium on-board computer on your smartphone
- Stable pylon made from highest- grade seawater-proof aluminum
- Extra robust design protects against damage from debris – wear-resistant and maintenance-free
