### Description

Control Unit for Type 0.5Hydraulic Pump, Cockpit MK II Wheel Drive and Cockpit Tiller Drive drive units

The ACU-100 (Actuator Control Unit) is a key component in Evolution autopilot systems.

The ACU-100 houses the main power and drive electronics for direct connection to your vessel's steering system and 12-volt DC electrical source.

Combine the ACU-100 with an EV-1 heading sensor, an autopilot control head, and a compatible autopilot drive to create a complete Evolution autopilot system.
