Description

The ST1000 tiller pilot is a self-contained, removable autopilot system for tiller-steered boats. Inside the durable housing is a powerful electric linear drive, precision fluxgate compass, and an easy-to-use control panel. A quick mounting and connect/disconnect system allows you to transition from hand-steering to autopilot control easily. Built-in SeaTalk networking allows the tiller pilot to communicate with the rest of your networked instruments, wind instrument, and chartplotter.

Convenient AutoTack mode lets you handle the sheets while the pilot tacks the boat, and AutoSeastate intelligently keeps the boat on course while conserving power.

Whether used as a stand-alone autopilot or with SeaTalk/ NMEA GPS, the clear backlit LCD and 6-button keypad make these tiller pilots safe and easy to use.
